Sustainable Intensification-Jules N. Pretty 2012-06-25 Continued population growth, rapidly changing consumption patterns and the impacts of climate change and environmental degradation are driving limited resources of food, energy, water and materials towards critical thresholds worldwide. These pressures are likely to be substantial across Africa, where countries will have to find innovative ways to boost crop and livestock production to avoid becoming more reliant on imports and food aid. Sustainable agricultural intensification - producing more output from the same area of land while reducing the negative environmental impacts - represents a solution for millions of African farmers. This volume presents the lessons learned from 40 sustainable agricultural intensification programmes in 20 countries across Africa, commissioned as part of the UK Government's Foresight project. Through detailed case studies, the authors of each chapter examine how to develop productive and sustainable agricultural systems and how to scale up these systems to reach many more millions of people in the future. Themes covered include crop improvements, agroforestry and soil conservation, conservation agriculture, integrated pest management, horticulture, livestock and fodder crops, aquaculture, and novel policies and partnerships.

A Revision of Combretaceae in Australia-N. B. Byrnes 1977 Combretaceae is a pantropic family containing 18 genera, four having native of naturalised species in Australia. Terminalia is a genus estimated to contain 200 - 300 species distributed throughout the tropical world and in the largest and most critical genus in Australia with 29 species. Two species T. arenicola. and T. savabicola are described as new, and T. supranitifolia is a new name for T. discolor F. Muell. non Spreng. The morphological features used to distinguish the species have been critically examined, thus enabling clarification of the variation within the species. Detail studies made of the changes in shape which occur during the development of the fruit and of the internal structure of the fruit to give a better delineation of the taxa. Field studies of the over number of seasons and over a wide area of their distribution gave useful information on the growth and seasonal changes in the plants and the ecological limitations of their distribution.

Marketing-Roger A. Kerin 2007 MARKETING: THE CORE, 2/e by Kerin, Berkowitz, Hartley, and Rudelius continues the tradition of cutting-edge content and student-friendliness set by Marketing 8/e, but in a shorter, more accessible package. The Core distills Marketing's 22 chapters down to 18, leaving instructors just the content they need to cover the essentials of marketing in a single semester. Instructors using The Core also benefit from a full-sized supplements package. The Core is more than just a "baby Kerin"; it combines great writing style, currency, and supplements into the ideal package.
